

## Biologic Quantum Supersymmetry

What does our new, universal bio additive suggest? Its principle is original. The technology of preparation is different from any known technology of chemical bioactive substances. It can be used both for animals and for plants. It is based on the physical processes taking place on intracellular level.

New chemical products are out of ideas, except for genes engineering and hormonal interventions. This is still a subject to debates. Our product is absolutely harmless, based on the harmonization powers of natural quantum supersymmetry. Development of our product was inspired by such great scientists as de Broglie, Compton and particularly E. Schrodinger.

I have transferred the theories of Schrodinger into practice, by intervening the process of entropy inside the cell. According to the task we can release the excess amount of negative energy which is gathering inside a cell, and allow it to receive a new portion of universal life energy.

According to our practical observations the following parameters were increased:

1. Lifespan;
2. Resistance to environmental damage;
3. Absorption of necessary substances;
4. Rate of growth;
5. Reproduction rate;
6. End product amount by 20-30%.

The product is based on sugar, which absorbs quantum waves, which can be manipulated according to the task.

Sincerely

Doctor Homoeopathist, President of the Independent Homoeopathist Association of Georgia

Giorgi Nadareishvili, MD, PhD.
